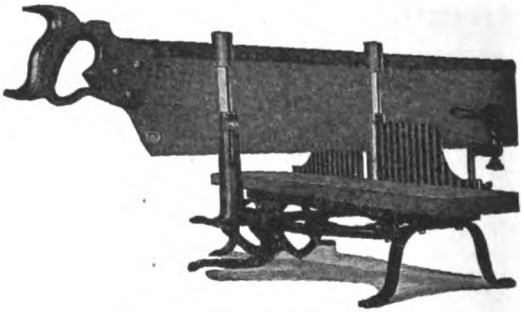
The Crown Miter Boxes

From the Crown Tool Manufacturing Company of Ottumwa, Iowa, makers of the Crown miter boxes, comes some circular matter which is descriptive of these Crown miter boxes and details their various superior features.

These Crown miter boxes have both a high and a low stop and saw can be raised 1½ inches above bed by release lever. A particular feature of this machine is that the release lever can be operated while holding the handle of the swinging



The Well Known Crown Miter Box

bar. This enables the operator to use one hand to hold stock and at the same time swing saw to any desired angle. The high stop holds saw 5¼ inches above bed while placing stock for cutting.

The machine has a positive center and octagon stop, also a graduated brass circle and any degree can be obtained very easily.

The release lever has an eccentric latch which locks the swinging bar securely at any place without the use of a screw driver or lever.

The Crown miter boxes are made of cast iron malleable iron and steel. They have oak bottoms ¾ inch by 5 inches by 24 inches. Extra lengths are made up specially. Crown miter boxes are manufactured in four sizes.

In addition to the making of Crown miter boxes the Crown Tool Manufacturing Company include in their varied line the manufacturing of saws, bevel try-squares, nest of saws, saw sets, folding handles, draw knives, ratchet braces, expansive bits, automatic screw drivers, automatic hand drills.

The company have a special agency proposition they are offering carpenters and builders and for particulars as to this and circular matter concerning the various tools of their making address the Crown Tool Manufacturing Company, Ottumwa, Iowa.
